

Introducing MASHNET F.I.S.T. HITECH Act and HIPAA Compliant Security for Local Networks

MASHNET F.I.S.T. (Firewall & Integrated Security Technology)

- Secure Local Area Networks with Enterprise Level Firewall and Router
- Protect Health Records stored on your premises
- Put an end to unauthorized Internet Usage
- HIPAA and HITECH Act Security GUARANTEED!

M.A.S.H., Inc. announces availability of its MASHNET F.I.S.T. (Firewall & Integrated Security Technology), which is used to secure network connections from both external and internal threats. MASHNET F.I.S.T. provides Enterprise Level protection to clients with broadband connections to the Internet by providing a variety of security protocols that ensure compliance with The HITECH Act of 2009.

Physicians and other medical professionals are required to properly secure Internet and Local Area Network (LAN) connections by November 30, 2009 to be in compliance with the new regulations. This cannot be done with the vast majority of inexpensive wired and wireless routers that are typically found in physician's offices.

Unlike many of the expensive Enterprise Level firewall / routers available from companies like Sonicwall, Watchguard and Cisco, MASHNET F.I.S.T. performs the same essential functions of these devices at a fraction of the cost **PLUS** many additional features not available on certain lower cost models.

MASHNET F.I.S.T. includes:

- DHCP Server and Dynamic DNS Client Services
- Web Guardian (prevents abuse of Internet browsing by denying access to pornographic, shopping, social networking and other undesirable and malicious web sites)
- Anti-Virus software built-in with automatic updates
- Proxy Server
- Remote Administration, Monitoring and monthly reports (1st-year included)
- Network Address Translation (NAT), Port Forwarding and Filtering
- 100% compatible with existing wireless access points
- Prevents DoS (Denial of Service) and other brute force attacks
- HIPAA and HITECH Act Compliant

The use of almost any Enterprise Level firewall / router device is the equivalent of installing a security fence and a gate to keep out intruders, hackers, scammers, spammers and other threats from the Internet. The features included with MASHNET F.I.S.T. are the equivalent of installing the security fence, the gate and adding a security guard to monitor what comes in AND goes out.

Simply put, MASHNET F.I.S.T. offers a broader range of security benefits that literally costs thousands of dollars less than its competitors. Most IT Firms will sell a device, set it up and walk away; leaving the client with little or no resource for reconfiguration when required services or needs change.
